Real-World Impact Statistics

- Smart Multi-Modal Transportation Planner
- Key data showing why smart mobility systems are important.

TRAFFIC TIME LOSS

- • Commuters in highly congested cities can lose around 160+ hours per year in traffic.
- • This equals nearly 7 full days wasted annually.
- • Smart route planning systems help users choose faster routes and reduce travel delays.

URBAN TRAFFIC CONGESTION

- • Some major cities experience congestion levels above 70%.
- • High congestion leads to longer commute times and fuel waste.
- • Multi-modal planners distribute commuters across buses, trains, and shared mobility.

SLOW TRAVEL SPEED IN CITIES

- • Average travel speed in congested cities can drop to about 16–17 km/h during peak hours.
- • Efficient route optimization can significantly improve mobility and travel efficiency.

Environmental Impact

- • Road transportation contributes about 15% of global greenhouse gas emissions.
- • Encouraging public transport and shared mobility helps reduce pollution.
- • Smart planners promote eco-friendly transportation choices.

WHY THIS PROJECT MATTERS

- • Reduces congestion
- • Saves commuter travel time
- • Encourages sustainable transportation
- • Supports smart city mobility solutions
